

Omni Communication Assistant (OCA) Performance Overview

Albertus Ariel Renara Pranata - Bellatrix/Team 4

Virtual Internship RevoU x Telkom Indonesia

Business Background

OCA Indonesia is a Communication Platform-as-a-Service (CPaaS) owned by Telkom Indonesia. It enables businesses to communicate at scale through multi-channel messaging integrations, serving enterprise clients across various industries.

What is OCA Blast?

- A mass messaging platform enabling businesses to send messages at scale.
- Supports Single Blast (one-time), Scheduled Blast (set time), and Repeated Blast (recurring).
- Revenue is generated from successfully delivered (billable) messages only.

Channels Supported

- WhatsApp — conversational messaging with read receipts.
- SMS — universal, high-reliability text delivery.
- Email — rich content with engagement tracking.
- Call / IVR — automated voice message delivery.

Why This Analysis Matters

- OCA serves enterprise clients who rely on channel reliability for marketing, notifications, and operations.
- Understanding delivery performance, usage trends, and user behavior is critical for maintaining OCA's position as a trusted CPaaS leader.
- This analysis transforms raw transaction data into actionable insights for Product and Business teams.

Executive Summary

Key findings from Q1 2025 (January - March) across 122,749 transactions and 20 enterprise clients.

Total Messages 122,749	Delivery Rate 79.5%	Failure Rate 1.3%	Active Clients 20	Total Revenue Rp 25.9M
Channel Highlights - WhatsApp leads volume at 50,000 msgs (40.7%). - SMS achieves 99.7% success rate – most reliable. - Call has a critical 77.6% Ring-No-Answer rate. - Email volume dropped 60% over 3 months.	Revenue Insights - Total Q1 revenue: Rp 25,946,420. - SMS contributes highest revenue at Rp 11.8M. - Monthly revenue declining: Rp 9.4M → Rp 8.0M → Rp 8.5M. - Overall message volume dropped 28% in 3 months.	User Behavior - All 20 clients use all 4 channels. - Top 3 clients drive 60% of total volume. - All top users show month-over-month volume decline. - No single-channel dependency risk identified.		

Dataset Scope

Tables Used

- wa_transactions — 50,000 rows, 8 columns (WA-specific: message_type, received_timestamp).
- sms_transactions — 20,000 rows, 7 columns (includes total_sms, total_price).
- email_transactions — 40,000 rows, 6 columns.
- call_transactions — 12,749 rows, 6 columns.
- users — 20 rows, 4 columns (client master data).

Key Columns

- transaction_id — unique message identifier.
- user_id / user_name — client identifier.
- channel — WhatsApp, SMS, Email, Call.
- status / last_status — delivery outcome.
- is_charge — billing flag (true = billable).
- price / total_price — revenue per transaction.
- created_at — message timestamp.

Analysis Period & Coverage

- Period: January 2025 – March 2025 (Q1 2025).
- Total transactions analyzed: 122,749.
- Total clients: 20 enterprise users.
- Industries: Travel, Real Estate, Finance, Education, Retail, Hospitality, Logistics, Telecom, eCommerce.
- All data prepared via BigQuery UNION ALL query, exported to CSV for Tableau Public analysis.

What Was Not Included

- Individual recipient data (no PII).
- Message content or campaign details.
- Real-time or live connection data.
- Historical data prior to January 2025.
- WhatsApp message_type not available for other channels.

Chosen Metrics & Filters

Metric	Formula / Definition	Business Purpose
Total Messages Sent	COUNT(transaction_id)	Measures overall platform activity
Delivery Rate (%)	Success msgs ÷ Total msgs × 100	Platform effectiveness per channel
Failure Rate (%)	Failed msgs ÷ Total msgs × 100	Identifies reliability issues
Active Users	COUNTD(user_name)	Platform engagement level
Total Revenue (Rp)	SUM(price) WHERE is_charge = true	Billable transaction income
Monthly Trend	COUNT per DATETRUNC(month)	Growth or decline signal

Dashboard Filters Applied:

Date Range (Jan–Mar 2025) · Channel (WA / SMS / Email / Call)

Methodology

01

Data Extraction

Connected to BigQuery and ran a UNION ALL query across all 4 transaction tables, joined with the users table to produce a unified dataset of 122,749 rows.

02

Data Export & Connection

Exported the unified dataset as a CSV file and connected it to Tableau Public. Resolved column naming and date format issues (year fix: 0025 → 2025).

03

Metric Creation

Built calculated fields in Tableau: Status Category, Delivery Rate, Failure Rate, Hour of Day, Time Segment, Month, and Total Revenue.

04

Visualization & Dashboard

Designed 6 worksheets (Messages per Channel, Delivery Effectiveness, Top Users, Usage Trend, Traffic by Time, KPI cards) assembled into an interactive dashboard.

05

Insight Extraction

Identified key patterns: Email volume collapse, Call RNA crisis, platform-wide volume decline, and top user fatigue signals from Q1 data.

Dashboard Overview

Dashboard Structure

- Tool: Tableau Public (interactive, shareable via link).
- Layout: Fixed 1200×800px, tab-based navigation.
- Global filters: Channel and Date Range.
- All charts update simultaneously when filters are applied.

Components Included

- 5 KPI Cards: Total Messages, Delivery Rate, Failure Rate, Active Users, Revenue.
- Messages per Channel (bar chart).
- Delivery Effectiveness per Channel (100% stacked bar).
- Top Users by Volume (horizontal bar, Top 10).
- Usage Trend by Month & Channel (line chart).
- Traffic by Hour of Day (bar chart with time segments).

Key Navigation Note

- The 'Messages per Channel' chart functions as an interactive filter — clicking any bar filters all other charts to that channel only.
- Date and channel filters in the filter panel apply globally across all dashboard sections simultaneously.

Dashboard URL:

Insight 1: Message Volume by Channel

WhatsApp dominates platform usage while Call remains the least utilized channel.

Volume Distribution

- WhatsApp: 50,000 msgs — 40.7% of total.
- Email: 40,000 msgs — 32.6% of total.
- SMS: 20,000 msgs — 16.3% of total.
- Call: 12,749 msgs — 10.4% of total.

Key Takeaway

- WhatsApp and Email together account for 73.3% of all platform traffic.
- Call channel has the lowest adoption despite being a supported channel.
- Diversified channel usage reflects broad client adoption of the OCA ecosystem.

Insight 2: Delivery Effectiveness by Channel

SMS is the most reliable channel. Call faces a critical performance issue with a 77.6% Ring-No-Answer rate.

Channel	Success Rate	Failure Rate	Notable Status
SMS	99.7%	0.3%	sent: 99.7%
Email	81.3%	1.4%	opened: 44.2%, clicked: 2.8%
WhatsApp	84.8%	1.8%	read: 51.1% (highest engagement)
Call	21.9%	0.6%	RNA: 77.6% – critical issue

WhatsApp achieves a 51.1% read rate – the highest engagement signal across all channels.

SMS – Best Performer

- 99.7% success rate with only 66 failed messages out of 20,000.
- Most reliable for critical notifications and operational messages.

Call – Critical Issue

- 77.6% Ring-No-Answer (RNA) rate – 9,887 out of 12,749 calls unanswered.
- Only 2,788 calls (21.9%) successfully answered.
- Immediate review of IVR targeting and timing strategy required.

Insight 3: Platform Usage Trend – Declining Volume

Overall message volume dropped 28% from January to March 2025. Email saw the sharpest decline at 60%.

Monthly Volume

- January: 49,534 messages.
- February: 37,723 messages (-24%).
- March: 35,492 messages (-6%).

Email Collapse

- Jan: 20,000 → Feb: 12,000 → Mar: 8,000.
- 60% volume drop in just 3 months.
- Root cause unknown – requires urgent investigation.

Stable Channels

- WhatsApp dipped in Feb but recovered in March.
- SMS remains stable throughout Q1.
- Only Call shows minor consistent decline.

Insight 4: Revenue Analysis

Total Q1 revenue stands at Rp 25.9M. SMS generates the highest revenue despite lower volume. Monthly revenue is under pressure.

Monthly Revenue Trend (Rp M)

Revenue by Channel (Rp M)

Monthly Revenue Trend

- January: Rp 9.4M — highest in Q1.
- February: Rp 8.0M — sharpest drop (-15%).
- March: Rp 8.5M — partial recovery (+6%).

Revenue by Channel

- SMS: Rp 11.8M (45.5%) — top contributor.
- WhatsApp: Rp 10.3M (39.5%).
- Call: Rp 2.3M · Email: Rp 1.6M.

Revenue at Risk

- Email's 60% volume drop threatens Rp 1.6M+ future revenue.
- Charged message count fell from 38.6K to 28.2K — revenue compression signal.

Insight 5: User Activity & Fatigue Signals

Top 3 clients drive 60% of total volume but all show consistent month-over-month decline — a potential churn risk signal.

Top 3 User Volume Decline

- CV Wisata Indo: 9,839 → 7,213 (–27%).
- PT Dana Nusantara: 10,014 → 6,997 (–30%).
- CV Land Sejahtera: 9,796 → 7,165 (–27%).

Platform-Wide Concern

- All 20 clients use all 4 channels — no single-channel dependency.
- However, ALL users show declining volume trend in Q1.
- This is a platform-level signal, not isolated to specific clients.

Churn Risk Signal

- Consistent volume decline across all top users suggests possible platform dissatisfaction or migration to alternatives.

Insight 6: When Does Traffic Peak?

Platform traffic is concentrated between 08:00–20:00. The busiest hour is 11 AM with 9,865 messages. Call channel is inactive after 17:00.

Peak Hours (11–12)

Evening Drop (18–20)

Afternoon (12–17): 48,713 msgs • Morning (08–12): 39,114 msgs • Evening (17–20): 34,922 msgs

Peak Hours

- 11 AM: 9,865 messages — busiest hour.
- 12 PM: 9,843 messages — close second.
- Traffic is near-flat from 08:00–17:00.

Call Behavior

- Call channel is completely inactive after 17:00.
- All 12,749 call messages sent in 08:00–17:00 window only.

Key Implication

- Schedule blast campaigns between 10–13:00 for maximum reach and engagement.

Root Causes

Insights & Recommendations

01

Audit & Optimize the Call Channel

Immediately investigate the 77.6% RNA rate. Implement time-based sending windows, improve recipient list quality, and consider reducing IVR campaign volume until targeting is optimized.

02

Investigate Email Volume Collapse

Conduct client interviews to understand the 60% Email drop. Determine if it is budget-driven, campaign-driven, or a platform issue. Develop an Email re-engagement strategy.

03

Leverage WhatsApp as Primary Growth Channel

With 51.1% read rate and 84.8% delivery rate, WhatsApp is the highest-engagement channel. Prioritize it for marketing campaigns and client acquisition.

04

Monitor Top Client Retention

CV Wisata Indo, PT Dana Nusantara, and CV Land Sejahtera together drive 60% of volume. Assign dedicated account managers and implement proactive engagement to prevent churn.

05

Stabilize Revenue via SMS

SMS delivers the highest revenue (Rp 11.8M) with 99.7% reliability. Position SMS as a premium reliability offering and grow its adoption among clients currently using only Email or Call.
